

Learn

Study:

- Reading text files
- Writing text files
- CSV files
- Installing packages using pip
- Basic error handling (`try / except`)

Practical Work

Program 1 – Student File

Create a program that saves student names into a text file.

Read the file and display all students.

Program 2 – Motor Sensor Data Generator

Generate random values for:

- Temperature
- Voltage
- Current
- RPM

Save at least **100 records** into a CSV file.

Example:

```
Time, Temperature, Voltage, Current, RPM  
09:00, 61, 415, 8.2, 1480  
09:01, 60, 414, 8.1, 1482  
09:02, 62, 416, 8.3, 1478
```

Program 3 – Summary

Read the CSV file and display:

- Highest Temperature
- Lowest Temperature
- Average Temperature

Git Task

Commit and push all work.

Create a README explaining:

- What you learned this week
- Programs you built
- Challenges you faced
